

Your sandbox walkthrough

One workspace for custom homes, commercial work, and small-volume production.

1. Start with the portfolio

Open Projects. Compare Naples Coastal Custom, Bonita Interior Renovation, Estero Wellness & Showroom, and the five S01-S05 production homes. Each project changes the navigation to match its work type.

2. Explore a real workflow

On Naples Coastal Custom, inspect the schedule, review the countertop RFI, compare a finish decision, and edit the draft waterfall-edge change order. Sample tasks connect design decisions to fabrication and installation.

3. Try the production workflow

Open Communities to explore the eight fictional scattered sites. Plans contain three illustrative Gold-, Noir-, and Luxe-inspired concepts. Use Sales, Starts, Purchasing, and Design Studio to explore buyer holds, release gates, trade pricing, and finish choices.

4. Review the financial story

Every project has a detailed budget, sample trade commitments, bills awaiting review, and draft billing. Amounts are illustrative. No sample invoice has been sent, no funds have moved, and no external accounting connection is configured.

5. Find the fit for interiors and stone

Arc can coordinate finish options, approvals, deadlines, RFIs, changes, and subcontract scope today. Slab inventory, remnant tracking, nesting, fabrication scheduling, and a standalone interior-design business workflow are custom-feature discovery topics.

6. Continue through delivery

Explore punch items, inspections, turnover requirements, the upcoming closing, and S05 warranty requests. Use these examples to test which roles and handoffs your team needs.
